Continuation of 3. NOTE: The shift in focus from a single network to a plurality of networks and the newly proposed claims conserning isolated point-to-point cable communication Ethernet networks raise new issues that would require further consideration and/or search.

Continuation of 11. does NOT place the application in condition for allowance because: As per the nonfunctional descriptive material present in claim 1, for example, specifically, the patient information as part of the message, the patient information is nonfunctional descriptive material because the same functionality is achieved if other information is substituted for the patient information. Applicant teaches a distributed messaging system between terminals, medical devices, and servers. The messages themselves do not limit the functionality of the messaging system. Furthermore, the Examiner has given the messages weight, in fact, the Surwit reference, as cited, teaches patient information messages. The Examiner was simply pointing out that little weight need be placed on the message content since the content of the message did not alter or change the functionality of the system.

As per the allegation that the combination of De la Huerga, Ng, and Surwit is improper because an artisan of ordinary skill would not combine them, the Examiner respectfully disagrees. No point of novelty was seen that distinguishes Applicant's claim 1, for example, over the prior art. Applicant teaches a distributed messaging network and the applied prior art reasonably pertains to the particular problem with which Applicant is concerned and were correctly combined as per MPEP 2141 (III) to meet the claimed invention. See the rejections in the 02/17/2009 Final Rejection Office Action. Applicant is reminded that the references must be considered as a combination.

In response to applicant's argument that the Examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See In re McLaughlin, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Applicant's arguments are not persuasive and the claims remain rejected.
